

Supplemental Fig. 1

Supplemental Fig. 1: Myogenesis induced by myogenin and Mef2D is inhibited by the expression of dominant negative Brg1. Immunostaining of B22 cells that had been cultured in the presence or absence of tetracycline (tet) and either mock (M) infected or infected with retroviruses encoding MyoD, myogenin, and/or Mef2D. Following infection, cells were differentiated for 36 hrs and then stained with anti-MHC antibody. Bright field images are also shown. White scale bar – 10 micrometers.
